PROFESSIONAL SUMMARY

Frontend-focused IT undergraduate with demonstrated experience building and shipping production-ready web applications using React, TypeScript, and Supabase. Contributed to a live collaborative learning platform with real-time chat, AI model integration, and file sharing — deployed and accessible at scale. Passionate about clean component architecture, seamless UX, and writing code that ships.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3
Frontend: React.js, Vite, Responsive Design
Backend & DB: Supabase (PostgreSQL, Auth, Realtime, Storage), REST APIs
Cloud: AWS (core services), Vercel (deployment)
Data & ML: NumPy, Pandas
Tools & AI: Git, GitHub, GitHub Actions (CI), Claude, Gemini, Antigravity

PROJECTS

CoLearn - Collaborative Learning Platform *2025 - 2026*

Tech Stack: React · TypeScript · Supabase (Auth, Realtime, Storage) · Groq & Mistral AI APIs · Vite · Vercel | Live: colearn-ecru.vercel.app

- Contributed to a **production-deployed** study collaboration platform used by real users; integrated real-time group chat with support for image pasting and file uploads using Supabase Realtime and Storage.
- Built an AI assistant settings panel allowing users to plug in their own API keys for Groq and Mistral AI models — enabling personalized in-workspace AI support without a shared backend cost.
- Implemented active member tracking and session-scoped file access controls using Supabase RLS (Row Level Security), ensuring data is scoped correctly per study group.
- Delivered a responsive UI with full dark/light mode toggle and smooth CSS transitions, targeting cross-device consistency from mobile to desktop; deployed via Vercel with GitHub Actions CI.

Inside - Personal Fitness Tracker *2026*

Tech Stack: React · JavaScript · Supabase · CSS3

- Developed a full-stack fitness dashboard enabling users to log workouts, track health metrics (sets, reps, weight, duration), and review historical trends across multiple training sessions.
- Integrated Supabase for persistent data storage and user authentication, enabling secure multi-session workout history that syncs reliably across devices.
- Designed a goal-setting and streak system to surface consistency milestones, promoting user retention through positive habit reinforcement loops.
- Built a mobile-responsive React interface with modular component architecture, keeping UI state predictable and enabling clean separation of data and presentation layers.

EDUCATION

Bachelor of Technology - Information Technology *2023 - 2027*

Jawaharlal Nehru Technological University, Hyderabad
